

Jared Pattison

Software Engineer

(206) 849-7029 | jaredpattison@gmail.com | linkedin.com/in/jaredpattison | jaredpattison.com | Seattle, WA

PROFESSIONAL SUMMARY

Software Engineer with 8 years of experience, including 6 years at Oracle Cloud Infrastructure (OCI), specializing in React and TypeScript frontend engineering for enterprise cloud applications. Expertise in reusable UI systems, cloud identity platforms, and developer tooling, backed by full-stack experience building Java REST APIs and distributed services. Delivered secure, scalable OCI Identity Domains console features and workflows while improving maintainability, reliability, and engineering velocity through automation, observability, testing, and AI-assisted development.

CORE COMPETENCIES

- React / TypeScript
- Frontend Architecture
- Reusable UI Systems
- Java / REST APIs
- OAuth / Identity
- Agentic Development

TECHNICAL PROFICIENCIES

- Languages:** TypeScript, JavaScript, Java, SQL, JSON, YAML
- Frontend:** React, HTML, CSS, Web Components, component architecture, state management, design systems
- APIs / Platform:** REST APIs, GraphQL, Node.js, OAuth, OpenAPI/Swagger, distributed systems
- Testing / Quality:** Jest, Playwright, React Testing Library, accessibility, performance, observability
- Tools / Delivery:** GitHub Actions, CI/CD, Webpack, Terraform, Claude Code, AI-assisted development

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Identity — OAuth September 2023 – November 2025

Oracle Cloud Infrastructure

- Built React-based OCI Console workflows for OAuth and session-management features, connecting frontend identity experiences with Java REST APIs and distributed authentication services.
- Built a Java REST API endpoint for MySessions visibility and session-management workflows, contributing to distributed session management across multi-region identity services.
- Cut incident resolution time and improved debugging efficiency by building authentication observability capabilities for a high-scale identity platform supporting millions of daily authentication requests.
- Reduced alert noise by 50% and improved on-call efficiency by refactoring canary test infrastructure for critical authentication flows.
- Lowered regressions by 20% and strengthened incident response by owning on-call operations and improving monitoring, alerting, and postmortem practices.

Software Engineer, Identity — Domains SDK April 2023 – September 2023

Oracle Cloud Infrastructure

- Led cross-functional delivery of the OCI Identity Domains Client SDK for Python, Java, and Go, guiding a team of 4 engineers to unify a fragmented legacy API ecosystem.
- Secured alignment from senior identity architects and platform stakeholders by authoring and driving architectural design documents addressing legacy compliance gaps.
- Enabled SDK generation for non-compliant legacy endpoints by rewriting the core Swagger generator while preserving backwards compatibility.
- Drove developer adoption by creating comprehensive usage examples, clearly articulating system limitations, architectural tradeoffs, and implementation options for enterprise end users.

Oracle Cloud Infrastructure

- Delivered OCI Identity Domains console features for Dynamic Groups, Policies, Reports, and Applications by building reusable React components and hooks that conformed to OCI's existing design system and partnering with product and UX through required design reviews for each component, page, and workflow.
- Reduced duplicated frontend implementation work by designing a metadata-driven reports component that generated reusable UI tables from backend templates.
- Modernized legacy React components by migrating class-based components to functional architecture, improving maintainability and performance.
- Reduced deployment effort by 60% by automating multi-region plugin deployments with Terraform and streamlining release workflows.

Software Developer (Contract)

November 2019 – December 2019

Indigo Slate

- Developed Node.js middleware to query and transform client API data into structured JSON responses, supporting data visualization in an enterprise real estate dashboard.

Technical Program Manager, Student Technology Services

May 2016 – December 2018

University of Alberta

- Led delivery of web platforms, improving team productivity and delivery timelines.
- Managed roadmaps and coordinated distributed engineering teams, contributing to system scalability improvements and new service integrations.

PROJECTS

Developer Tools (<https://utils.dev>)

Built and deployed a browser-only React/TypeScript developer tools app on CloudFront for Base64, JSON/YAML/XML, and JWT workflows. Added contextual AI chat using Chrome's built-in AI APIs.

Multi-Agent LLM Development System Personal Project

Built a TypeScript orchestration layer for custom LLM agent teams, delegating repository research, implementation, and review across role-specific agents with tailored prompts, tools, models, and verification gates. Designed context management around separate agent sessions and selective durable memory for decisions, rejected approaches, blockers, and handoffs.

EDUCATION

Bachelor of Arts, Economics University of Saskatchewan

CERTIFICATIONS

Full-Stack JavaScript Certificate (React/Node.js/Socket.IO) — Code Fellows (2019)

Certified Scrum Master (CSM) — Scrum Alliance (2017)

Project Management Professional (PMP) — Project Management Institute (2016)

Project Management Certificate — University of British Columbia (2016)
